

kepler::CircleBar::
operator()

kepler::CircleStile
::operator()

kepler::rotate

```
graph LR; A[kepler::CircleBar::operator()] --> C[kepler::rotate]; B[kepler::CircleStile::operator()] --> C;
```

The diagram illustrates two function pointers on the left, each enclosed in a white box with a black border. The top box contains the text 'kepler::CircleBar::operator()' and the bottom box contains 'kepler::CircleStile::operator()'. Two blue arrows originate from the right side of these boxes and point towards a single gray box on the right. This gray box contains the text 'kepler::rotate', representing the target function that both pointers reference.
